
Vector Mechanics For Engineers Statics

vector mechanics for engineers: statics - itsltech - • a force vector is defined by its magnitude and direction. its effect on the rigid body also depends on its line of action. • the moment of f about o is defined as $m_o = r \times f$ • the moment vector m_o is perpendicular to the plane containing o and the force f . • any force f' that has the same magnitude and direction as f , is equivalent if it also has the same line of action and therefore ...
